

The Coming Wave by Mustafa Suleyman

The Coming Wave explores how artificial intelligence, biotechnology, and other fast-growing technologies may transform society. It discusses the huge benefits of innovation but also the risks if these tools are not managed wisely.

Main Ideas:

- AI and biotech will reshape economies and daily life.
- Powerful tools can create both progress and danger.
- Governments and institutions may struggle to keep up.
- Responsible rules and safety systems are needed.
- Society must balance innovation with control.

Overall Message:

Humanity is entering a major technological era that requires wisdom, preparation, and global cooperation.

Algorithms to Live By

Algorithms to Live By shows how computer science ideas can help people make better everyday decisions. It applies algorithms to choices about time, work, searching, sorting, and planning.

Main Ideas:

- Use smart rules when information is limited.
- Balance exploring new options and choosing known good ones.
- Prioritize tasks efficiently.
- Accept that not every problem has a perfect answer.
- Good systems reduce stress and wasted effort.

Overall Message:

Principles from computer science can improve decision-making and daily life.
